WORCESTER ACCREDITED INSTALLERS

We know the consequences, problems and inconvenience when you have no heating and hot water. It's paramount to have trust and confidence in any product or service.

As Worcester Accredited Installers (WAI's), we are accredited to install Worcester boilers and underfloor heating to the highest standard.

All our gas safe engineers specialise in Worcester Bosch boiler installations and we can offer exclusive benefits to you as the homeowner.

The UK's leading gas boiler brand.

Our premium services demand a premium brand, they both go hand in hand to deliver a product you can trust with a service you can rely on.

That's why our boiler brand of choice Worcester Bosch has won the best value gas boiler for 12 years in a row as voted by 'Which?'.

We also install, repair & service a range of other boiler brands including Baxi, Vaillant, Ideal & Viessmann.

FIVE KEY THINGS YOU NEED TO KNOW BEFORE BUYING A NEW BOILER

Most homeowners change the boiler within their home every 8 - 12 years, obviously depending on how well it has been looked after during this period.

So, it's really important to think about some important factors when looking to swap your old inefficient boiler for a more modern energy efficient boiler.

Here at Gas Service Ltd, we have selected 5 key areas that should help in your decision-making process.

1) RELIABILITY

It's relatively straight forward, the more reliable your new boiler is, the less headache you will have with repairs and costs.

Nearly all boiler manufacturers provide a guarantee or warranty period, so make sure you choose a boiler brand that can provide you with peace of mind.

2) RESEARCH

This is not just jumping onto Google and using the search term 'best boilers', but also asking friends, family and work colleagues.

You want a straight answer and those who are closest to you can provide an honest assessment.

3) EFFICIENCY

This will be a major advantage if your boiler is old as changing to a modern condensing boiler will save your money on your energy bill.

Information that has been provided by independent body 'Sedbuk', shows that if you live in a detached home and are replacing a heavyweight boiler with a modern condensing boiler. You could see an annual saving of up to £652 every year.

5) SIZE

When selecting the best size boiler for your home, you really need to consider 2 main factors:

1) The heating and hot water capabilities of the new boiler and, more importantly, whether that accommodates the demand in your home

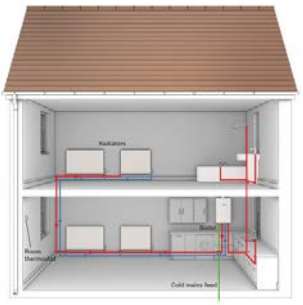
2) The size of the boiler and if it will fit into the existing space left by the previous boiler

All of these points will be discussed by your surveyor who will be providing you with a detailed quotation.

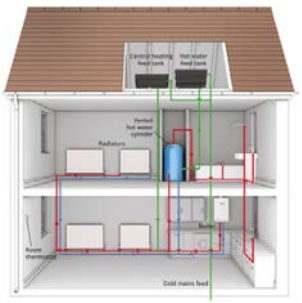
They will have the experience and expertise to review all your requirements and provide a breakdown of the work required.

4) TYPES

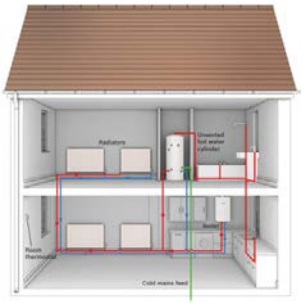
There are 3 main types of gas condensing boiler to choose from, a combi boiler; a conventional boiler or a system boiler.



1) Combi boiler: heats water as you need it and eliminates the need for you to have a water tank in your home.



2) Conventional boiler: (also known as heat-only boiler) requires a hot water tank or cylinder, in which hot water can be stored for later use.



3) System boiler: like a heat-only boiler, but more components are built-in. This can normally make a system boiler easy to install as they tend to need less space.

WHY WE FIT WORCESTER BOSCH MAGNETIC FILTERS

If you are looking to protect your investment in a new boiler and make it last as long as possible, then fitting a Worcester Bosch magnetic filter can really help.

- Keeps your boiler running efficiently
- Helps to reduce running costs
- Get a longer guarantee on your new boiler
- It prolongs the life of your boiler

We additionally offer the service to power flushing your system that includes your magnetic flush system using magna clean. The objective is to catch and remove deposits of iron oxide sludge, rust and any other magnetic debris from the radiators and pipework and restore systems with circulation problems or boiler noises caused by the murky water and corrosion deposits.

THE IMPORTANCE OF A THERMOSTAT & CONTROLS

It's paramount that you have the right heating controls within your home to ensure that you have a comfortable temperature without wasting fuel or heat.

If you have a central heating system, whether its gas, LPG or oil-fired, your full set of controls should ideally include a boiler thermostat, a timer or programmer, a room thermostat and thermostatic radiator valves (TRVs).

You could save money on your energy bills by installing and using your controls efficiently.

You can schedule your heating and hot water to go on and off as required.

You can select areas within your home to heat at your desired temperature, instead of heating all of your home at the same temperature.

You are reducing your CO2 carbon dioxide emissions.

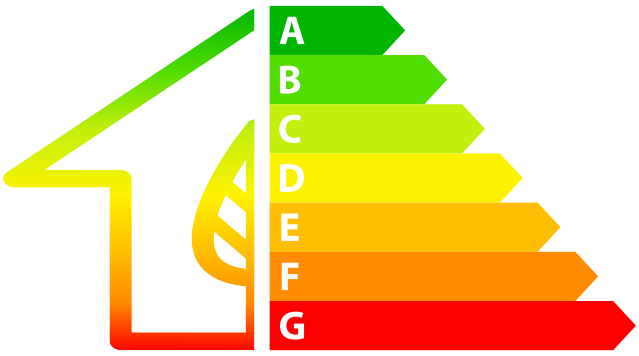
BOILER EFFICIENCY

WHAT IS THE RATING?

A boiler's energy efficiency rating is an indicator of how much it's going to cost you to run.

It's a great way to compare new boilers to find out which model is likely to save you more on your energy bills. If you are currently using an old boiler, it's likely that you could save money by replacing it with a modern energy efficient boiler.

"Heating accounts for about 55 per cent of what you spend in a year on energy bills, so an efficient boiler makes a big difference."



WHAT COULD I SAVE?

There are several factors that will determine your energy bills savings when replacing your old boiler with a more efficient model. These include the size of your home, the fuel used by the boiler, and the inefficiency of your existing boiler.

The 'Energy Saving Trust' provide a full breakdown in relation to your expected savings. For example:

If you live in a detached property and have a 'G' rated boiler, you can expect annual savings in excess of £652 per year.

It's paramount to ensure that when you replace your old boiler with a new A-rated model, you include a programmer, a room thermostat and thermostatic radiator controls (TRVs).

It's about being energy smart at home and for every little effort you put in, you will see the benefit in the reduction of your home energy costs.

OUR OTHER SERVICES

BOILER SERVICING

Annual servicing will ensure that your boiler is running efficiently and safely for the year ahead and minimises the risk of breakdowns thus increasing the lifespan of the boiler as well.

It also validates any manufacturer's warranty or guarantees for the appliance.

More importantly, it ensures that you and your family are safe. Gas safety is paramount and an annual boiler service will ensure that any problems are identified before accidents occur.

BOILER REPAIRS

We have a first-time fix rate of 75% but if we require parts that we don't hold in our fully stocked vans, then we are usually able to source these for the next working day.

We are able to provide this efficient service due to having a great working relationship with multiple manufacturers and suppliers who also understand our customer's needs and share our vision for offering an efficient and high-level service.

All pricing is transparent and explained upfront. All repairs come with 12-month parts and labour guarantee ensuring that you can entrust your repairs to Gas Service Ltd.
